The Insightful Power

It seems that we are not familiar with the concept of an insightful power. Rather than dealing seriously with an intelligent entity, the people are more inclined to ridicule the authority. By which, in fact, it weakens the possibility of a popular revolt. In the context of south-east Asia, the situation is made more complicated by the fact that the government is expected to be more flexible and ignore the restrictive laws and principles just to make the policies work. When the government runs without strict regulations, ironically, the power becomes more inductive to creativity, and needs an insight of the society more desperately. And thus a different breed of politics emerged. Those who are excluded are being calculated and manipulated with subtleties to make the least harm and the most of every useful capital for the politicians. We no longer need a restoration to endorse the return of total domination and of an era reigned by the morals.
